Q-Plex™ Human Cytokine Screen IR (9 Plex)

The Q-Plex™ Human Cytokine – IR (9-plex) is a fully quantitative ELISA-based Infrared (IR) assay allowing the concurrent measurement of nine biomarkers or analytes (IL-1α, IL-1β, IL-2, IL-4, IL-6, IL-10, IL-12p70, IFNγ, TNFα).

Each kit contains a 96-well plate, featuring the relevant biomarker panel, and all the reagents required to perform testing. Q-Plex plates are built by absorbing nine distinct capture antibodies in a defined array to the bottom of each well. Our high quality reagents help ensure the accuracy of your results.

Using just 50 µl of sample per well, up to 80 samples can be assayed for all nine markers in the panel within 2.5 hours. Q-Plex™ Arrays provide researchers with an easy-to-use and cost effective means of generating a cytokine profile for each sample.

**The Q-Plex™ Array**

**SPOTTING IN 96 WELL PLATE**
- Robotic liquid handlers print 20-50nL spots of capture antibody
- Each spot is a unique assay within the well
- Low spot-to-spot variability (CV)
- Spot size 350-500μm
- Plates are QC’d for spot quality

**PERFORMING THE ASSAY**
- Add 50μL of sample
- Wash
- Add mix of detection antibodies specific to kit
- Wash
- Add streptavidin conjugated HRP or IR-Dye

**DETECTION OF SAMPLE**
- With the addition of substrate, a response is produced
- If antigen is present the spot emits a signal proportional to the amount of antigen in the sample
- If no antigen is present, the spot is not visible

**IMAGE CAPTURE**
- An image of the plate is taken via a high resolution camera (Q-View Imager or approved gel doc system) or fluorescent scanner (LI-COR Odyssey)
- The image file (TIFF) is imported into Q-View Software and a Q-View Project is created

**IMAGE ANALYSIS**
- Image is opened in Q-View Software
- Spots are automatically found on plate image
- Intensity of spot response is measured and raw data is generated
- User imports product specs and well layout

**DATA ANALYSIS**
- Raw data is analyzed and compared to in-plate standard
- Regression models used to calculate unknowns
- Standard curves are calculated and sample and statistical data is exported

**Q-Plex™ ARRAYS**
Our Q-Plex Arrays are quantitative multiplex ELISAs with distinct proteins deposited in a defined array. Choose one of our standard kits for immediate delivery or customize the exact array you need.

**Q-View™ IMAGER**
The Q-View Imager is a high quality, low-cost imaging system for chemiluminescent assay imaging.

**Q-View™ SOFTWARE**
Q-View Software is a user-friendly image analysis package that enables the acquisition and analysis of large amounts of multiplex ELISA data.

**SAMPLE TESTING SERVICE**
Our lab runs immunoassays on a wide variety of sample types from bioresearch. Increase productivity and focus on your core research while we test your samples for you.
